

— THE RECORDS ARE THE ASSET

In aviation, every minute on paperwork stands between you and monetizing your assets.

Agentic Records Manager (ARM) reads every record, verifies it against the standards that govern your parts, and auto-assembles the finished document packages your deals turn on. Days of cross-department chasing collapse into one clear, shared workflow spanning procurement, sales, quality, and logistics — so your teams stop hunting paper and start closing.

less time preparing pre-purchase and sales document packages.

PER TRANSACTION

— REPORT TEMPLATES

Start from a template — or build your own. Two of the most-used packs; more ship with the product.

FOR PROCUREMENT · BUYING

Pre-Purchase Inspection Report

Know exactly what you're buying — before you commit.

ARM builds the inspection package straight from the records and flags every missing 8130-3, broken back-to-birth chain, and inconsistent field up front. You bid and buy on facts, not on a seller's promise.

● AUTO-ASSEMBLED · REVIEW-GATED

FOR SALES & MARKETING · SELLING

USM Trace Document Package

Prove the asset. Close the sale — your logo and brand on the pack.

A complete, verified USM trace pack — commercial trace, ARCs, removal and shop records — assembled and ready to attach to any quote or listing. Buyers get the confidence to move; you protect full value on the way out.

● AUTO-ASSEMBLED · REVIEW-GATED

PART SALES KIT

Everything to quote and ship a part.

ENGINE SALES KIT

Full records for an engine sale.

LEASE RETURN

Ready-to-go checklists to manage return of your aircraft, engine, and components from lease.

CUSTOM

Built to match your exact workflow.

+ MORE

THE PIPELINE, LIVE

TESSARON · COPILOT

Meet Tessaron.

INCLUDED

Tessaroon is ARM's **included copilot** — the document-intelligence meta-model Block Aero builds, tunes, and manages for you. Point it at your aircraft, lease, and asset records: it reads, classifies, links, and verifies every page, so your people work from clean, audit-ready data instead of paper. You own the decisions; Tessaron does the heavy lifting. It is not what you buy — **ARM Agent** is the billed unit. Usage is metered in Aero Compute Credits (ACC).

- One orchestrated pass — intake, classification, extraction, linking, and compliance
- Relationship mapping and airworthiness compliance flags across documents
- Hundreds of ATA, ASA, AFRA, and IATA standard record types — including handwriting
- Powerful AI performance by multi-model orchestration

HOW IT WORKS

From an unsorted stack to an auto-assembled pack.

WHAT YOU BUY

ARM AGENT

The billed unit. In-product: Deploy Agents. Go to ARM Agent to plan autonomous work. Tessaron stays the copilot.

SKU

TESSARON · COPILOT

Included with ARM. Grey copilot that reads, classifies, and verifies. Not a SKU.

INCLUDED

Get access to ARM — free to start, no card, no demo. Deploy Agents when you want a Records Manager on this account. Tessaron ships with the workspace; there is no Tessaron edition to pick.

Fluent in the documents you live in. read by Tessaron, ARM's included copilot, and validated against the standards that govern your parts

PROJECT STATUS

FOR USM & PARTS DISTRIBUTORS

Every part ships with a clean trace pack.

Turn a part's scattered paperwork into a complete, verified trace package — ready to attach to a quote or ship in the box. Catch missing 8130-3s and broken chains before your customer does, and re-package the same records for sales, purchasing, and quality in seconds.

FOR ASSET MANAGERS & LESSORS

From messy lease return to clean deliverables.

Redeliveries always land late and in a panic — ARM is the extra pair of hands. It sorts the mountain of records an operator hands back, verifies every document, and produces organized, high-quality deliverables — no surge headcount, no expensive records consultants.

THE PAYOFF

Faster transactions

Deal-ready packages in a fraction of the time — up to 90% less prep per transaction.

Protected asset value

Complete, verified trace keeps parts sellable and assets at full residual value.

Collaborative & integrated

One shared, genuinely enjoyable workflow across procurement, sales, quality, and logistics.

Audit-ready by default

Every document classified, checked, and logged continuously — not at crunch time.

TRUSTED BY DESIGN

Human-in-the-loop

ARM never signs, releases, or issues airworthiness. A named reviewer still approves — nothing enters a package until they do, or it clears the confidence threshold you set.

Proof of Ownership

ON-CHAIN

Secure proof of ownership and an unbroken chain of custody, recorded on the Block Aero Aviation Blockchain Network (ABN).

Regulation-aware

Built around FAA, EASA, and CAAC document standards and the exact fields each one requires.

Enterprise-ready

Sign in with Google, or a password your administrator controls. Your records are visible only to your organization — isolation enforced in the database.
